

THE OPSIDA SYSTEM · ONE CLOSED LOOP

LEAN INTELLIGENCE THAT NEVER LEAVES THE FLOOR.

Five products, one air-gapped loop: capture the work, expose the waste, balance the line, standardize it, run it — and the video never touches a cloud. This is the moat.

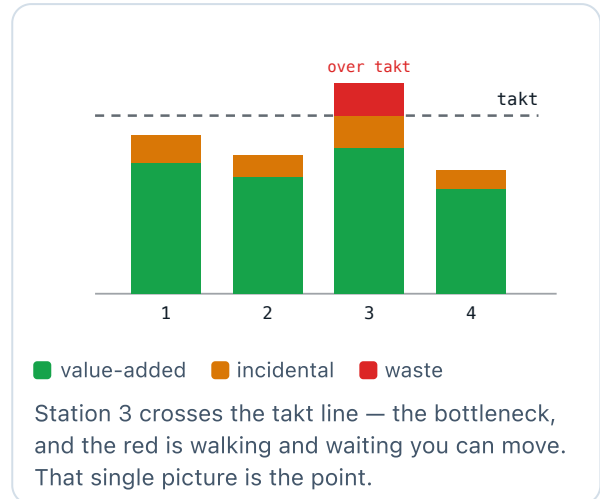

● **Data path** — video & standards, all on-prem ● **Execution** — the standard back to the floor **Studio** SHIPPING
Companion · Airlock · Flow · WorkSense PILOT **VSM** BETA

The loop closes on the floor — and the moat is that it never opens to the cloud.

Yamazo Studio ·
yamazovas.com

See the hidden waste in your line — in five minutes, offline.

A stopwatch gives you a number and misses the variation. Yamazo turns shop-floor video into a Yamazumi chart that shows, station by station, exactly where the time goes — value-added, incidental work, and waste — against takt. No cloud. The video never leaves your machine.

ONE OFFLINE DESK, FROM VIDEO TO STANDARD WORK

01 Capture Record the job on any camera or phone.	02 Split & time Click-split into work elements, frame-accurate.	03 Yamazumi VA / incidental / waste, stacked vs takt.	04 Balance Drag work between stations to hit takt.	05 Standardize Standard work, SMED, A3 — same desk.
---	---	---	--	---

The whole loop lives in **one desktop app**, not five tools stitched through Excel — and it runs with the network cable pulled.

THE OPSIDA ECOSYSTEM

Studio SHIPPING The desk — time study, Yamazumi, line balancing, standard work, SMED, A3. Win + macOS.	Companion PILOT Browser capture on the floor — no install for the operator.	Airlock PILOT LAN sync; your whole IE team, git-style, still offline.
WorkSense PILOT AI pose & REBA ergonomics on the same video.	Flow PILOT Turns your standard into shop-floor execution.	VSM BETA Value-stream mapping on a live canvas, in Studio.

The video never leaves your machine Air-gapped by design. No upload, no cloud account, nothing for IT security to block. Works in the most locked-down plant.	Per-seat, no dongle Clean per-seat licensing your team shares over LAN — not a USB key tied to one PC like the legacy tools.	Modern, actively shipped One integrated desk, current UI — not a 15-year-old click-splitter with balancing bolted on as an export.
